**2nd Edition
Coming Fall '23
More Routes &
A Complete Redesign**

MakingTurns in Colorado's Tenmile/ Mosquito Range, 2nd Edition by Fritz Sperry due Fall 2023.

Enclosed is a sample of Giterdun Publishing's upcoming, *MakingTurns in Colorado's Tenmile/Mosquito Range, 2nd Edition* by Fritz Sperry. This title is the 2nd edition of Fritz Sperry's first guidebook. He will be including new routes in this new edition of his sold out guidebook., along with the old routes from the original Tenmile Mosquito book and the Tenmile Mosquito routes from MakingTurns in Colorado The North will migrate here to give the user the most complete source for the range that is the backbone of Summit, Lake, Park and Chafee Counties.

This second edition will feature full color photos throughout, and will retail at a price TBD once we get closer to production. There are **100+ routes on 50+ peaks and zones** ranging from Frisco south to almost Buena Vista, with easy access routes winter and spring for Frisco, Copper Mountain, Breckenridge, Leadville, Alma and Fairplay. There have been some access changes since the first edition and those will all be covered. There are many routes suitable for winter turns, along with the classic spring ski mountaineering lines. We're still doing photo, writing and layout work as we speak so a final count on photos is still to be determined, but there will be well over 400 full color photos for sure. Press date is set for October 2023. Print run for this second edition will be 3000 copies.

benefits of advertising

This is a guidebook not a magazine. This is the Giterdun Publishing's fourth guidebook. One of the great benefits of guidebook advertising is the longevity of the media. Some guidebooks have a lifespan of 20-30 years. Since this medium has such a long lifespan and receives attention from multiple users you get a great return on your investment. This is a great opportunity to get your brand into the minds, backpacks and bookshelves of your targeted users for many years to come.

thank you

Check out the Routes section in the sample layouts on the following pages. We hope you'll want to get on board and we're looking forward to hearing back from you soon.

Please get in touch if you have any questions.

rates + services advertising

As with all the guidebooks we offer advertising space. Rates are below. If you need design service see below. If you need art service see below. As with all of our books there will be a presentation to support the titles release. Premium advertisers(non-retailers) will receive logo placement in the presentation, these shows support local non-profits, this year's supported, Backcountry Babes, El Paso and Summit SAR, FOBP, FOSJ and the George Dirth Education Fund. We expect gear contributions for these benefit raffles. Thanks for supporting the community.

Repeat Advertisers will receive a 20% Discount on Ads the same size or larger

33d - "Half Peak"	Curtain Rod to the Flying Ridge	
DIFFICULTY: Advanced	DISTANCE: 4.5 Miles Roundtrip	VERTICAL: 4,400'
SUNHIT: Sunrise	ASPECT: Southwest	SEASON: Spring
TRAILHEAD: Boreas Pass Road	MAP: Page 268	PHOTO: Page 45-47

Of all the lines I skied in Tenmile Canyon, for research and the search for the ultimate turn, this was my favorite. It can also be the most serious. If you get slid on the Flying Ridge section you will most likely perish as the lower section ends in a cliff out, this after

48 MOUNT SHERMAN – 14,036'

Many consider Sherman to be the easiest fourteener. This is probably true, when going at it via the standard Southeast Slopes. The East Chutes and the West Face offer more interesting alternatives for those seeking something more challenging than the easiest way. You can check out those other lines in *Making Turns in the Tenmile Mosquito Range*. The mountain is named for Civil War General William Tecumseh Sherman.

48a – Mt. Sherman	West Face	
DIFFICULTY: Advanced	DISTANCE: 8.4 Miles Roundtrip	VERTICAL: 3,500'
SUNHIT: Sunrise +3	ASPECT: West	SEASON: Spring
TRAILHEAD: Iowa Gulch	MAP: Page 309	PHOTO: Page 224-225

Can there be such a thing as an elusive classic? It would entail a line with perfect angle, a little spice to help keep the focus, a beautiful setting and finicky snow. The windward aspect of Mount Sherman is just such a place. The 1,600' West Face beckons the skier; it taunts from the highway and town; multiple chutes grace the wide face, a cliff band runs across the bottom, there are passages through it. This line has it all, except reliable snow, the top couple hundred feet are often bare. When the spring, upslope storms spin from the east and load this line up, take advantage of the window and go for it.

From the winter junction, skin up the road, to the base of the face. Take a moment along the way to study the face and line up the summit position. Then, once you know where you want to be, ascend and follow your boot track for the descent. Angles range from low to high 40s.

Airing out the bottom cliff.
